
CAUTIOUS
PORTFOLIO

EDITION 35 June 2021

RISK

3

Cautious Investor

You accept some risk & aim for a reasonable return. You accept the risk of a small to moderate loss with modest yet frequent fluctuations in value.

*Potential return of 16.28%
& potential loss of -11.43%*

CAUTIOUS PORTFOLIO

EDITION 35 June 2021

The Cautious Portfolio is a blended style strategy. It is aimed at medium to long term investors who are seeking a relatively cautious investment that has a genuine prospect of capital growth.

The chosen investment funds can invest in fixed interest securities, commercial property, cash, UK and overseas equities and alternative assets. They are actively managed by leading fund managers to maximise total return whilst maintaining control of risk.

The Cautious Portfolio performance is benchmarked against the average performance of the IA Mixed Investment 0%–35% sector and has a risk rating and investor profile of 3 out of 10.

RISK

Potential return of 16.28%
& potential loss of -11.43%.

Prospective Risk Level

Historic Risk Level

A **risk level 3** investor should be prepared to accept annual returns somewhere **within the range of a -11.43% loss and a 16.28% gain** — returns within this range would be expected 95% of the time. It should be remembered that there is a 5% chance that **risk level 3** portfolios will experience an annual return outside this range — this means an investor may experience **losses greater than -11.43% or gains greater than 16.28%** at some point(s) during their investment in one year.

It is important to remember the figures are not intended to be and should not be taken as a projection of the likely returns from the portfolio risk levels. This is intended to support the risk discussion following the completion of a risk profile questionnaire. They show the implied volatility and mean expected return of risk levels 1 to 10 to two standard deviations in one year (ie all returns are expected to be between these extremes in 95 years out of 100; this is often described as a 95% confidence level). The figures shown are the expected arithmetic average returns and the ranges assume that returns are based on a log normal distribution. Figures are shown net of tax and underlying manager fees.

Range of Returns

Upper Return

16.28%

In 95 years out of 100, this is the highest expected level of return for a given level of risk. There is a 2.5% chance that returns could fall outside the upper return figure in one year.

Average of All Returns

2.43%

This is the average of all possible returns within a risk level in one year.

Lower Return

-11.43%

In 95 years out of 100, this is the lowest expected level of return for a given level of risk. There is a 2.5% chance that returns could fall outside the lower return figure in one year.

Cumulative Performance Chart

KEY Cautious Benchmark

Powered by data from FE fundinfo

Cumulative performance chart shows % growth from 01/04/2016 to 30/04/2021 calculated using bid prices with income re-invested into the fund net of tax. The following tables and charts illustrate the overall performance of the portfolio against its benchmark. The cumulative chart illustrates the overall performance over a maximum of five years dependant on the age of the portfolio and the table shows the overall performance broken down into specified periods. The discrete table and chart illustrates how the portfolio has performed against the benchmark during whole calendar years. All performance is to the latest month end and in GBP.

Cumulative Performance: % Growth to 11/05/2021
